# Using Bokeh Textures ~ The (very) Basic Tutorial

*Here is a very quick and basic tutorial on how to get started with Bokeh textures.*

Original

Texture

Open your image and copy and paste the texture on top of your image.

In the layers dialogue box there are various layer blending modes to choose from.
I find that SCREEN or SOFT LIGHT are good choices to start with.

In this instance I have used SOFT LIGHT and set the OPACITY to 90%.

The Bokeh may cover areas of your original image that you would prefer being visible so you can use the ERASER tool to delete any areas that you want back. Adjust the OPACITY of the ERASER tool to get a neater effect.

And that's it!
